BRINGING INNOVATION TO THE TABLE.[®]

A SUPERIOR TABLE FOR ORTHOPEDIC PROCEDURES

ANTERIOR APPROACH TO TOTAL HIP ARTHROPLASTY (THA)

HIP PINNING

HIP ARTHROSCOPY

TOTAL HIP RESURFACING

OPTIMIZES ANTERIOR APPROACH TO THA

The hana® enables the surgeon to replace the hip through a single incision, anterior approach without detachment of muscle from the pelvis or femur. The table allows hyperextension, abduction, adduction and external rotation of the hip for femoral component placement - a positioning option not possible with conventional tables. The lack of disturbance to the lateral and posterior soft tissues provides immediate stability of the hip after surgery.

FACILITATES MIS KNEE PROCEDURES

- Total Knee Flexion and Support System™ accommodates knee procedures including total knee replacement

EXCEPTIONAL TABLE MANEUVERABILITY

- Aids surgeon in articulation of lower extremities
- Spars include Spherical Spatial Positioning System (SSPS™)
- New fracture kit helps support all lower extremities fracture procedures

EXTENSIVE IMAGING CAPABILITY

- Carbon fiber construction
- Radiolucent cantilever top
- Radiolucent leg spars for uninterrupted imaging
- Unrestricted C-arm access

TEMPUR-PEDIC® MEDICAL PAD TECHNOLOGY

- Equalizes pressure load on patient during surgery
- Contours to patient anatomy with support
- Enhances patient comfort and safety
